

# Please Read This

I have aphasia from a stroke. Aphasia is a medical condition that means I have trouble understanding you, reading, writing, and speaking. I am intelligent but need some help with language.

To communicate with me:

- Speak slower with simpler language
- Write keywords for me
- Give me written choices for answers
- I use drawing/writing or a device to help me talk
- Ask me if I understand
- Call my caregiver for more information:
